Table 0.1 – Revisions

Rev Number	Date	Notes
10	05/17/2016	Initial Release
20	06/22/2016	Added DynaPro format for EMV transaction messages.
30	05/08/2017	Added support for mDynamo.
40	03/12/2021	Added at RequestSmartCard to Set Date and Time before starting an EMV transaction for non battery-backed devices.

SOFTWARE LICENSE AGREEMENT

IMPORTANT: YOU SHOULD CAREFULLY READ ALL THE TERMS, CONDITIONS AND RESTRICTIONS OF THIS LICENSE AGREEMENT BEFORE INSTALLING THE SOFTWARE PACKAGE. YOUR INSTALLATION OF THE SOFTWARE PACKAGE PRESUMES YOUR ACCEPTANCE OF THE TERMS, CONDITIONS, AND RESTRICTIONS CONTAINED IN THIS AGREEMENT. IF YOU DO NOT AGREE WITH THESE TERMS, CONDITIONS, AND RESTRICTIONS, PROMPTLY RETURN THE SOFTWARE PACKAGE AND ASSOCIATED DOCUMENTATION TO THE ADDRESS ON THE FRONT PAGE OF THIS DOCUMENT, ATTENTION: CUSTOMER SUPPORT.

TERMS, CONDITIONS, AND RESTRICTIONS

MagTek, Incorporated (the "Licensor") owns and has the right to distribute the described software and documentation, collectively referred to as the "Software."

LICENSE: Licensor grants you (the "Licensee") the right to use the Software in conjunction with MagTek products. LICENSEE MAY NOT COPY, MODIFY, OR TRANSFER THE SOFTWARE IN WHOLE OR IN PART EXCEPT AS EXPRESSLY PROVIDED IN THIS AGREEMENT. Licensee may not decompile, disassemble, or in any other manner attempt to reverse engineer the Software. Licensee shall not tamper with, bypass, or alter any security features of the software or attempt to do so.

TRANSFER: Licensee may not transfer the Software or license to the Software to another party without the prior written authorization of the Licensor. If Licensee transfers the Software without authorization, all rights granted under this Agreement are automatically terminated.

COPYRIGHT: The Software is copyrighted. Licensee may not copy the Software except for archival purposes or to load for execution purposes. All other copies of the Software are in violation of this Agreement.

TERM: This Agreement is in effect as long as Licensee continues the use of the Software. The Licensor also reserves the right to terminate this Agreement if Licensee fails to comply with any of the terms, conditions, or restrictions contained herein. Should Licensor terminate this Agreement due to Licensee's failure to comply, Licensee agrees to return the Software to Licensor. Receipt of returned Software by the Licensor shall mark the termination.

LIMITED WARRANTY: Licensor warrants to the Licensee that the disk(s) or other media on which the Software is recorded are free from defects in material or workmanship under normal use.

THE SOFTWARE IS PROVIDED AS IS. LICENSOR MAKES NO OTHER WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Because of the diversity of conditions and PC hardware under which the Software may be used, Licensor does not warrant that the Software will meet Licensee specifications or that the operation of the Software will be uninterrupted or free of errors.

IN NO EVENT WILL LICENSOR BE LIABLE FOR ANY DAMAGES, INCLUDING ANY LOST PROFITS, LOST SAVINGS, OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE, OR INABILITY TO USE, THE SOFTWARE. Licensee's sole remedy in

the event of a defect in material or workmanship is expressly limited to replacement of the Software disk(s) if applicable.

GOVERNING LAW: If any provision of this Agreement is found to be unlawful, void, or unenforceable, that provision shall be removed from consideration under this Agreement and will not affect the enforceability of any of the remaining provisions. This Agreement shall be governed by the laws of the State of California and shall inure to the benefit of MagTek, Incorporated, its successors or assigns.

ACKNOWLEDGMENT: LICENSEE ACKNOWLEDGES THAT HE HAS READ THIS AGREEMENT, UNDERSTANDS ALL OF ITS TERMS, CONDITIONS, AND RESTRICTIONS, AND AGREES TO BE BOUND BY THEM. LICENSEE ALSO AGREES THAT THIS AGREEMENT SUPERSEDES ANY AND ALL VERBAL AND WRITTEN COMMUNICATIONS BETWEEN LICENSOR AND LICENSEE OR THEIR ASSIGNS RELATING TO THE SUBJECT MATTER OF THIS AGREEMENT.

QUESTIONS REGARDING THIS AGREEMENT SHOULD BE ADDRESSED IN WRITING TO MAGTEK, INCORPORATED, ATTENTION: CUSTOMER SUPPORT, AT THE ADDRESS LISTED IN THIS DOCUMENT, OR E-MAILED TO SUPPORT@MAGTEK.COM.

1 - Introduction

1 Introduction

This document provides instructions for software developers who want to create software solutions that include an SCRA reader, Dynamag, DynaMAX, eDynamo, mDynamo, tDynamo, and DynaWave connected to a Windows-based host via USB, or BLE. It is part of a larger library of documents designed to assist SCRA reader, Dynamag, DynaMAX, eDynamo, mDynamo, tDynamo, and DynaWave implementers, which includes the following documents available from MagTek:

- *D99875475 MagneSafe V5 Programmer's Manual (COMMANDS)*
- *D998200176 Dynamag Programmer's Manual (COMMANDS)*
- *D998200175 DynaMAX Programmer's Manual (COMMANDS)*
- *D998200115 eDynamo Programmer's Manual (COMMANDS)*
- *D998200151 mDynamo Programmer's Manual (COMMANDS)*
- *D998200226 tDynamo Programmer's Manual (COMMANDS)*
- *D998200215 DynaWave Programmer's Manual (COMMANDS)*

1.1 About the MagTek SCRA WEB API

The MTSCRA WEB API, available from MagTek, provides demonstration source code and reusable MTSCRA WEBAPI DLLs that provide developers of custom software solutions with an easy-to-use interface for SCRA ready, Dynamag, DynaMAX, eDynamo, mDynamo, tDynamo, and DynaWave. Developers can include the MTSCRA WEBAPI DLLs in custom branded software which can be distributed to customers or distributed internally as part of an enterprise solution.

1.2 Nomenclature

The general terms “device” and “host” are used in different, often incompatible ways in a multitude of specifications and contexts. For example “host” may have different meanings in the context of USB communication than it does in the context of networked financial transaction processing. In this document, “device” and “host” are used strictly as follows:

- **Device** refers to the MSR device (eg. Dynamag) that receives and responds to the command set specified in this document.
- **Host** refers to the piece of general-purpose electronic equipment the device is connected or paired to, which can send data to and receive data from the device. Host types include PC and Mac computers/laptops, tablets, smartphones, teletype terminals, and even test harnesses. In many cases the host may have custom software installed on it that communicates with the device. When “host” must be used differently, it is qualified as something specific, such as “USB host.”

The word “user” is also often used in different ways in different contexts. In this document, user generally refers to the cardholder.

1.3 SDK Contents

File	Description
MTDevice.DLL	MagTek SCRA Device constance library
MTLIB.DLL	MagTek SCRA interface library
MTSCRANET.DLL	MagTek SCRA library for .Net

1 - Introduction

MTSCRA.WEBAPI.DLL	MagTek SCRA library for WEB API
MTServiceNet.DLL	MagTek SCRA connection service library for .Net

1 - Introduction

1.4 System Requirements

Tested operating systems:

Windows 7

Windows 8

Windows 8.1

Windows 10

Microsoft .Net Framework 4.5 installed.

Tested development environments:

Windows 8.1 with Microsoft Visual Studio 2013

1.5 Interfaces for Operating Systems

The following table matches the device interface to operating system.

Device	Interface	Operating System
SCRA readers	USB	Windows 7, Windows 8, 8.1 & Windows 10
Dynamag	USB	Windows 7, Windows 8, 8.1 & Windows 10
DynaMAX	USB	Windows 7, Windows 8, 8.1 & Windows 10
	BLE	Windows 8, 8.1 & Windows 10
eDynamo	USB	Windows 7, Windows 8, 8.1 & Windows 10
	BLE	Windows 8, 8.1 & Windows 10
mDynamo	USB	Windows 7, Windows 8, 8.1 & Windows 10
tDynamo	USB	Windows 7, Windows 8, 8.1 & Windows 10
DynaWave	USB	Windows 7, Windows 8, 8.1 & Windows 10

2 How to Set Up the MagTek SCRA WEB API

2.1 How to Connect MTSCRA WEP API Service to a Host

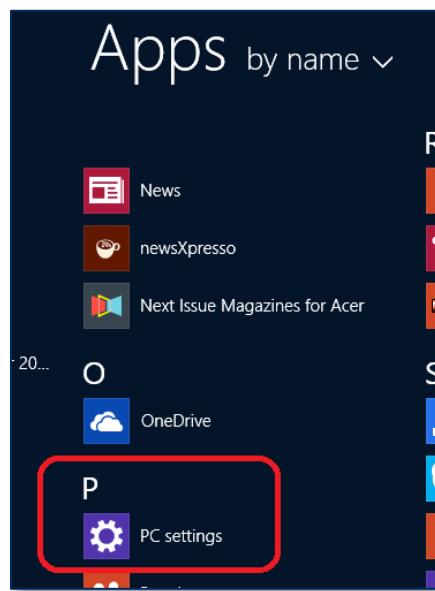

To use the WEB API (MTSCRA.WEBAPI.HostService.exe)

- 1) Set the header ContentType to "application/json"
- 2) Build the JSON object for the WEB API resource to be accessed.
- 3) Send HTTP request methods GET and POST to the base address <http://localhost:9002/api/mtscrahost/> and add the resource endpoints.

2.2 How to Connect DynaMAX or eDynamo to a Windows Host via BLE

To connect DynaMAX or eDynamo to a host with Windows 8.1 or higher and Bluetooth 4.0 hardware that supports BLE, follow these steps:

- 1) If you are using an external Bluetooth adapter, install any required drivers and connect it to the host.
- 2) On the host, install and configure the software you intend to use with DynaMAX or eDynamo:
 - a) Make sure the host software is configured to look for the device on the proper connection.
 - b) Make sure the host software knows which device(s) it should interface with.
 - c) Make sure the host software is configured to properly interpret incoming data from the device. This depends on whether the device is configured to transmit data in GATT format or streaming format emulating a keyboard.
- 3) Make sure the DynaMAX or eDynamo has an adequate charge
- 4) Unpair from any other host it is already paired with before continuing.
- 5) Enter app mode, scroll down to **Apps by name**, and launch the Windows **PC Settings** app.

- 6) In the left side navigator, select **PC and devices** > **Bluetooth**.
- 7) Make sure Bluetooth is turned on and close the **PC and devices** app.
- 8) Launch the Windows **Manage Bluetooth Devices** app by following these steps:
 - a) Enter desktop mode by swiping in from the left side of the touchscreen.

2 - How to Set Up the MagTek SCRA WEB API

- b) Touch the Bluetooth icon in the system tray and select **Add a Bluetooth Device** (see **Figure 2-1**).

Figure 2-1 - Launch Manage Bluetooth Devices App from Desktop Mode

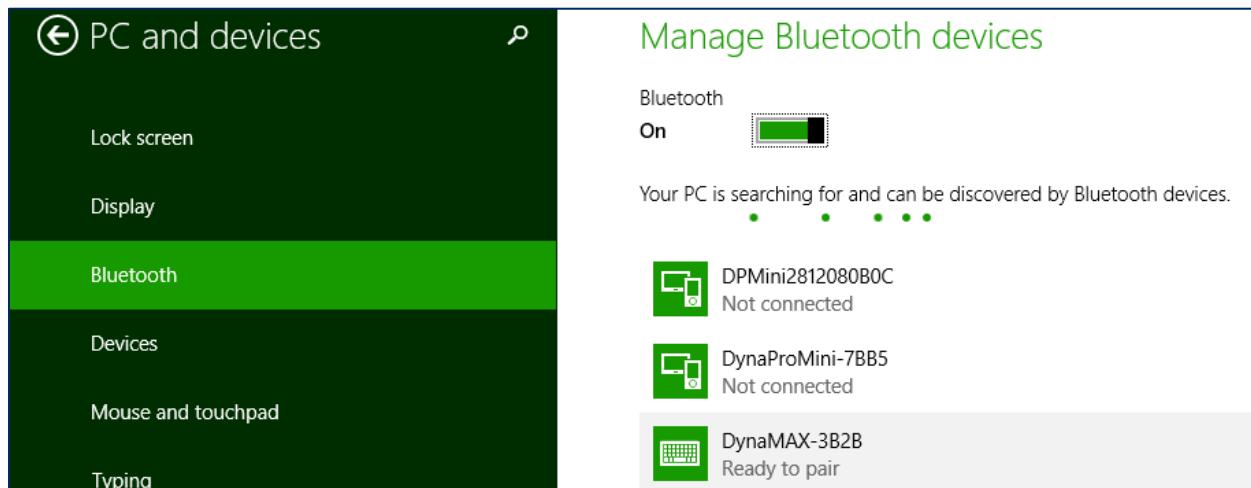

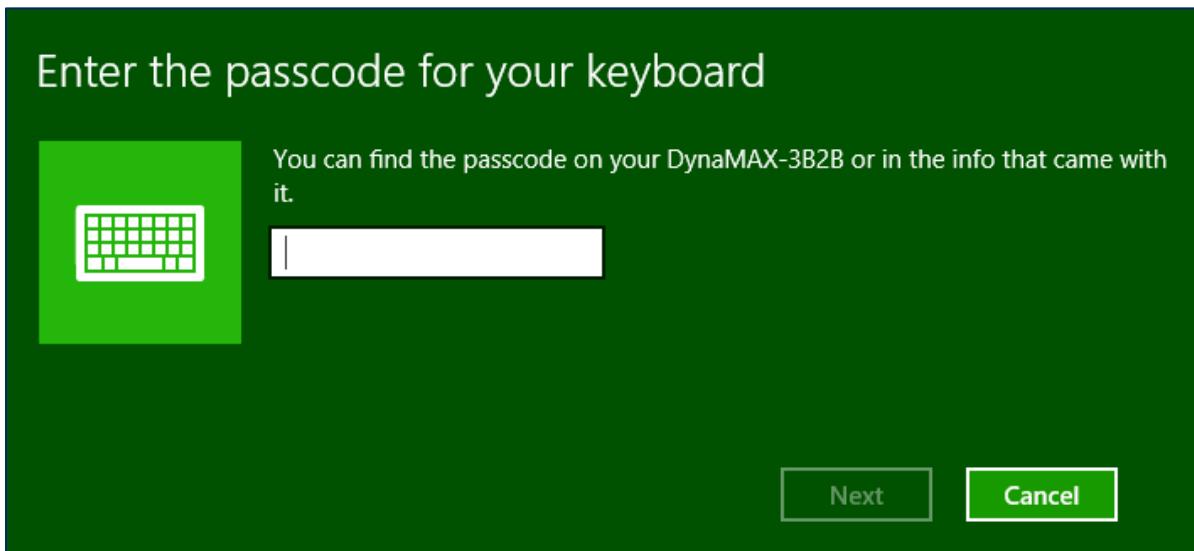

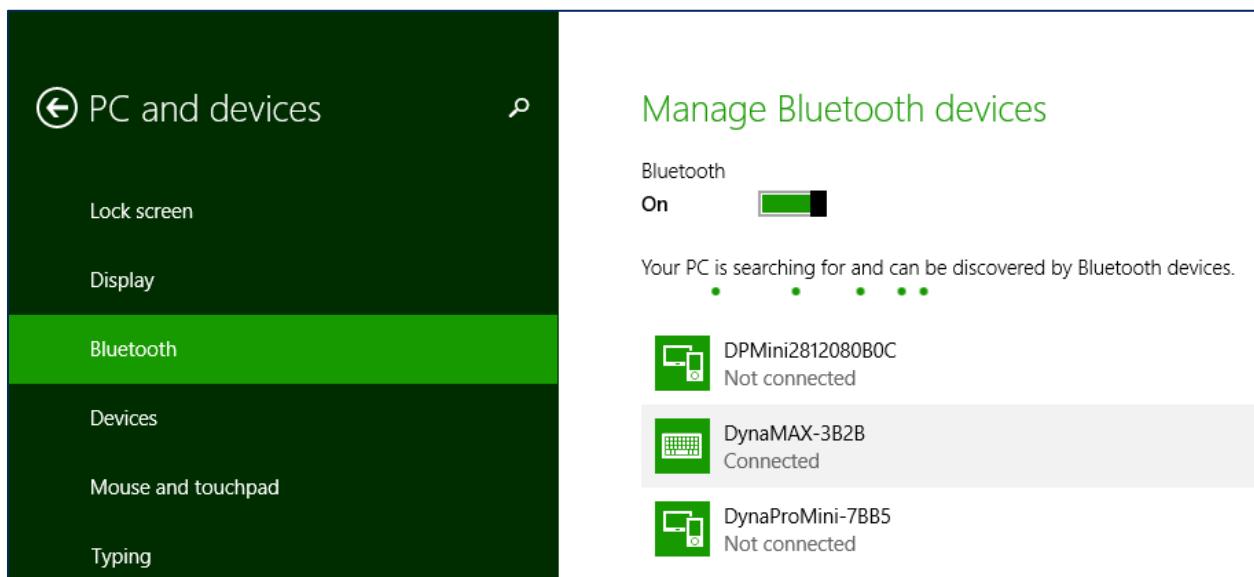

Figure 2-2 – Windows 8 Manage Bluetooth Devices App

- 9) Locate the serial number on the label on the bottom of the device. Note the final four digits.
- 10) Read through the list of pairable devices and locate the device called **DynaMAX-nnnn**, where nnnn is the last four digits of the device's serial number (if the device does not show in the list, power it off then power it back on). Below the device name you should see the text **Ready to pair**.
- 11) Select the device and press the **Pair** button. If the device is configured to run in KB mode, Windows will prompt you **Enter the passcode for your keyboard**.

2 - How to Set Up the MagTek SCRA WEB API

- 12) Enter default passcode **000000** (or the device's actual password if it has been configured differently), then press the **Next** button. Windows will return you to the **Manage Bluetooth devices** page. After a short period of time, you will see the text **Connected** below the device you are pairing with. After a few seconds the device will disconnect, which is normal power-saving behavior.

- 13) Use the host software to test swiping a card. If you do not yet have host software and the device is configured to run in KB mode, open any text editor and swipe a card. The card contents should appear in the text editor.
- 14) The device consumes very little power when not transmitting card data, so it is not necessary to power off the device to conserve power. If the device appears as **Not connected** in the Windows list of Bluetooth devices, swiping a card should cause the device to reconnect briefly, transmit the card data, then disconnect.

2 - How to Set Up the MagTek SCRA WEB API

15) Remember to change the default password. See the DynaMAX Mini Programmer's Reference documents for details.

To unpair from the device:

- 1) Locate the device in the **Manage Bluetooth devices** window.
Press the **Remove device** button.

3 - MTSCRA WEB API Resources

3 MTSCRA WEB API Resources

MTSCRA WEB API can be hosted as a Windows service (MagTek SCRA WEBAPI Host service or executable (MTSCRA.WEBAPI.Host.exe). MTSCRA WEB API receives REST requests and responses through a JSON object.

3.1 CheckHealth

Returns the operational status of the MTSCRA WEB API.

Using Method GET:

```
api/mtscrahost/CheckHealth
```

Return Value:

CheckHealth output. A String array containing API name and status.

```
[  
    "MagTek SCRA WEB API",  
    "OK"  
]
```

3.2 RequestDeviceList

Returns a string array containing key/value pairs of devices detected on the host based on connection type.

Using Method POST:

```
api/mtscrahost/RequestDeviceList(  
    int WaitTime,  
    int ConnectionType,  
    string[] AdditionalrequestData);
```

Parameter	Description
WaitTime	Time the device will wait for the user to complete a card swipe in seconds. (1 - 255)
ConnectionType	Device connection type: 1 = Audio 2 = BLE 3 = BLEEMV 4 = USB
AdditionalrequestData	Additional key/value pairs of data to be forwarded in the transaction.

Return Value:

The DeviceList output.

```
{"DeviceList": [{}], "AdditionalOutputData":{}}
```

3.3 RequestCardSwipe

Returns the magnetic stripe data after the device decodes a card swipe.

Using Method POST:

```
api/mtscrahost/RequestCardSwipe(
```

3 - MTSCRA WEB API Resources

```
string DeviceID,  
int WaitTime,  
int ConnectionType,  
string FieldSeparator,  
string[] AdditionalrequestData);
```

Parameter	Description
DeviceID	URI of the device. For USB devices, use an empty string to open the first device found. Call requestDeviceList to retrieve an array of devices detected on the host based on connection type. Example HID device: "DeviceID": "\\\\?\\hid#vid_0801&pid_0011#7&23521b27&0&0000#{4d1e55b2-f16f-11cf-88cb-001111000030}"
WaitTime	Time the device will wait for the user to complete a card swipe in seconds. (1 - 255)
ConnectionType	Device connection type: 1 = Audio 2 = BLE 3 = BLEEMV 4 = USB
FieldSeparator	Delimiter to separate the output data.
AdditionalrequestData	Additional key/value pairs of data to be forwarded in the transaction.

Return Value:

The CardSwipe output.

```
{"CardSwipeOutput": {}, "AdditionalOutputData": {} }
```

3.4 RequestSendCommand

Sends a command to the device and returns the raw response from the device.

Using Method POST:

```
api/mtscrahost/RequestSendCommand(  
string DeviceID,  
int WaitTime,  
int ConnectionType,  
string Command,  
string[] AdditionalrequestData);
```

3 - MTSCRA WEB API Resources

Parameter	Description
DeviceID	URI of the device. For USB devices, use an empty string to open the first device found. Call requestDeviceList to retrieve an array of devices detected on the host based on connection type. Example HID device: "DeviceID": "\\\\?\\hid#vid_0801&pid_0011#7&23521b27&0&0000#{4d1e55b2-f16f-11cf-88cb-001111000030}"
WaitTime	Time the device will wait for the user to complete a card swipe in seconds. (1 - 255)
ConnectionType	Device connection type: 1 = Audio 2 = BLE 3 = BLEEMV 4 = USB
Command	Command data to send to device in Hex format.
AdditionalrequestData	Additional key/value pairs of data to be forwarded in the transaction.

Return Value:

The Response output in Hex string format of device raw response for this command.

```
{  
    "ResponseOutput": {"Data":},  
    "AdditionalOutputData": null  
}
```

3.5 RequestSendExtendedCommand (EMV devices)

Sends an extended format command to the device and returns the raw response from the device.

Using Method POST:

```
api/mtscrahost/RequestSendExtendedCommand(  
    string DeviceID,  
    int WaitTime,  
    int ConnectionType,  
    string Command,  
    string[] AdditionalrequestData);
```

Parameter	Description
DeviceID	URI of the device. For USB devices, use an empty string to open the first device found. Call requestDeviceList to retrieve an array of devices detected on the host based on connection type. Example HID device: "DeviceID": "\\\\?\\hid#vid_0801&pid_0011#7&23521b27&0&0000#{4d1e55b2-f16f-11cf-88cb-001111000030}"

3 - MTSCRA WEB API Resources

WaitTime	Time the device will wait for the user to complete a card swipe in seconds. (1 - 255)
ConnectionType	Device connection type: 1 = Audio 2 = BLE 3 = BLEEMV 4 = USB
Command	Command data to send to device in Hex format.
AdditionalrequestData	Additional key/value pairs of data to be forwarded in the transaction.

Return Value:

The Response output in Hex string format of device raw response for this command.

```
{  
    "ResponseOutput": {"Data":},  
    "AdditionalOutputData": null  
}
```

3.6 RequestSmartCard (EMV devices)

Begins an EMV transaction.

Note:

Devices that do not have a battery-backed real time clock must use the device's command to Set Date and Time (extended command 0x030C) because the clock must be set before the device can process EMV transactions. The host software must Set Date and Time every time the device is power cycled or reset. A list of these devices include but not limited to: eDynamo, mDynamo, tDynamo, and DynaWave.

Using Method POST:

```
api/mtscrahost/RequestSmartCard(  
    string DeviceID,  
    int WaitTime,  
    int ConnectionType,  
    int TransactionType,  
    int CardType,  
    decimal Amount,  
    decimal CurrencyCode,  
    int ReportOptions,  
    int Options,  
    string[] AdditionalrequestData);
```

3 - MTSCRA WEB API Resources

Parameter	Description
DeviceID	URI of the device. For USB devices, use an empty string to open the first device found. Call requestDeviceList to retrieve an array of devices detected on the host based on connection type. Example HID device: "DeviceID": "\\\\?\\hid#vid_0801&pid_0011#7&23521b27&0&0000#{4d1e55b2-f16f-11cf-88cb-001111000030}"
WaitTime	Time the device will wait for the user to complete a card swipe in seconds. (1 - 255)
ConnectionType	Device connection type: 1 = Audio 2 = BLE 3 = BLEEMV 4 = USB
TransactionType	Type of transaction to be used: 0x00 = Purchase (listed as “Payment” on ICS) 0x01 = Cash Advance (not supported for this reader) 0x02 or 0x09 = Cash back (0x09 not supported, contactless) 0x04 = Goods (Purchase) 0x08 = Services (Purchase) 0x10 = International Goods (Purchase) 0x20 = Refund 0x40 = International Cash Advance or Cash Back 0x80 = Domestic Cash Advance or Cash Back
CardType	Card type that can be used for the transaction: 1 = Magnetic stripe 2 = Contact smart card 3 = Magnetic stripe or contact smart card
Amount	The amount to be used and authorized, EMV Tag 9F02. Format in decimal.
CashBack	Amount of cash back to be used, EMV Tag 9F02. Format in decimal.
CurrencyCode	Transaction Currency Code (EMV Tag 5F2A, format n4 string) Sample valid values: 0840 = US Dollar 0978 = Euro 0826 = UK Pound

3 - MTSCRA WEB API Resources

ReportOptions	This field indicates the level of Transaction Status notifications the host desires to receive during the course of this transaction: 0 = Termination status only (normal termination, card error, timeout, host cancel) 1 = Major status changes (terminations, card insertions, waiting for user) 2 = All status changes (documents the entire transaction flow)
Options	Transaction options: 0 = Normal 1 = Bypass PIN 2 = Force Online 4 = Acquirer not available
AdditionalrequestData	Additional key/value pairs of data to be forwarded in the transaction.

Return Value:

The Response output.

```
{  
    "ResponseOutput":  
    {  
        "ARQCDATA": ,  
        "BATCHData": ,  
        "UserSelection": ,  
        "CommandResult": ,  
        "AdditionalOutputData": null  
    }  
}
```

3.7 RequestUserSelection (EMV devices)

Sends the user selection result. RequestUserSelection should be called after RequestSmarCard returns data in the UserSelection field.

Using Method POST:

```
api/mtscrahost/RequestSendAcquirerResponse(  
    string DeviceID,  
    int WaitTime,  
    int ConnectionType,  
    int Status,  
    int Selection,  
    string[] AdditionalrequestData);
```

3 - MTSCRA WEB API Resources

Parameter	Description
DeviceID	URI of the device. For USB devices, use an empty string to open the first device found. Call requestDeviceList to retrieve an array of devices detected on the host based on connection type. Example HID device: "DeviceID": "\\\\?\\hid#vid_0801&pid_0011#7&23521b27&0&0000#{4d1e55b2-f16f-11cf-88cb-001111000030}"
WaitTime	Time the device will wait for the user to complete a card swipe in seconds. (1 - 255)
ConnectionType	Device connection type: 1 = Audio 2 = BLE 3 = BLEEMV 4 = USB
Status	The status of User Selection: 0x00 = User Selection Request completed, see Selection Result 0x01 = User Selection Request aborted, cancelled by user 0x02 = User Selection Request aborted, timeout
Selection	The menu item selected by the user. This is a single byte zero based binary value.
AdditionalrequestData	Additional key/value pairs of data to be forwarded in the transaction.

Return Value:

The Response output.

```
{  
    "ResponseOutput": {  
        "ARQCDData": ,  
        "BATCHData": ,  
        "UserSelection": ,  
        "CommandResult":  
    },  
    "AdditionalOutputData": null  
}
```

3.8 RequestSendAcquirerResponse (EMV devices)

Sends the result of an on-line processing decision from the acquirer to the device. The acquirer response will usually contain but not all inclusive an ARPC, Script 1, and Script 2 data.

Using Method POST:

```
api/mtscrahost/RequestSendAcquirerResponse (  
string DeviceID,  
int WaitTime,  
int ConnectionType,  
string IssuerAuthenticationData,  
string IssuerScriptTemplate1,
```

3 - MTSCRA WEB API Resources

```
string IssuerScriptTemplate2,  
string DeviceSerialNumber,  
int ApprovalStatus,  
string[] AdditionalrequestData);
```

Parameter	Description
DeviceID	URI of the device. For USB devices, use an empty string to open the first device found. Call requestDeviceList to retrieve an array of devices detected on the host based on connection type. Example HID device: "DeviceID": "\\\\?\\hid#vid_0801&pid_0011#7&23521b27&0&0000#{4d1e55b2-f16f-11cf-88cb-001111000030}"
WaitTime	Time the device will wait for the user to complete a card swipe in seconds. (1 - 255)
ConnectionType	Device connection type: 1 = Audio 2 = BLE 3 = BLEEMV 4 = USB
IssuerAuthenticationData	Response data returned from Acquirer to send to the device to complete the transaction.
IssuerScriptTemplate1	Issuer script template 1 from acquirer.
IssuerScriptTemplate2	Issuer script template 2 from acquirer.
DeviceSerialNumber	The device serial number used in constructing of the ARQC response message to be send to the device. See ARQC Response (from online processing) .
AdditionalrequestData	Additional key/value pairs of data to be forwarded in the transaction.

Return Value:

The Response output. BATCHData will contain the device response for the transaction.

```
{  
    "ResponseOutput": {  
        "ARQCData": ,  
        "BATCHData": ,  
        "UserSelection": ,  
        "CommandResult":  
    },  
    "AdditionalOutputData": null  
}
```

3.9 ReleaseDevice

Closes the connection to the device.

Using Method GET:

Dynamag, DynaMAX, eDynamo, mDynamo, tDynamo, DynaWave | Secure Card Reader Authenticator | Programmer's Reference (WEBAPI)

3 - MTSCRA WEB API Resources

```
api/mtscrahost/ReleaseDevice
```

Return Value:

None

Appendix A - MTSCRA WEB API Response Output Structures

Appendix A MTSCRA WEB API Response Output Structures

The MTSCRA WEB API returns the following outputs.

A.1 CheckHealth Output

Returned after checkHealth. A string array containing API name and status.

Example:

```
[  
    "MagTek SCRA WEB API",  
    "OK"  
]
```

A.2 DeviceList Output

Returned after requestDeviceList. The output contains a string array containing key/value pairs of devices detected on the host based on connection type.

Example:

```
{  
    "DeviceList": [  
        {  
            "Key": "MagTek SCRA 1",  
            "Value":  
"\\\\?\\hid#vid_0801&pid_0011#7&23521b27&0&0000#{4d1e55b2-f16f-11cf-  
88cb-001111000030}"  
        },  
  
        {  
            "Key": "MagTek SCRA 2",  
            "Value":  
"\\\\?\\hid#vid_0801&pid_0011#7&360bcbcc&0&0000#{4d1e55b2-f16f-11cf-  
88cb-001111000030}"  
        }  
    ],  
    "AdditionalOutputData": null
```

A.3 CardSwipe Output

Returned after a card swipe.

Example :

```
{  
    "CardSwipeOutput": {  
        "DeviceresponseData": {"Data": "000b3231303432383430475a31"},  
        "BatteryLevel": 100,

Appendix B - ARQC Message Format

Appendix B ARQC Message Format

This section gives the format of the ARQC Message delivered in the ARQC Message notification from the device. The output is controlled by Property 0x68 – EMV Message Format. There are currently 2 selectable formats: Original and DynaPro. It is a TLV object with the following contents.

Original Format:

```
FD<len>/* container for generic data */
DFDF25(IFD Serial Number)<len><val>
FA<len>/* container for generic data */
    <tags defined by DFDF02 >
        . Note: Sensitive Data cannot be defined in DFDF02
        .
        DFDF4D(Masked T2 ICC Data)
        DFDF52 - Card Type Used
        F8<len>/* container tag for encrypted data */
            DFDF56(Encrypted Transaction Data KSN)<len><val>
            DFDF57(Encrypted Transaction Data Encryption Type)<val>

            FA<len>/* container for generic data */
                DF30(Encrypted Tag 56 TLV, T1 Data)<len><val>
                DF31(Encrypted Tag 57 TLV, T2 Data)<len><val>
                DF32(Encrypted Tag 5A TLV, PAN)<len><val>
                DF35(Encrypted Tag 9F1F TLV, T1 DD)<len><val>
                DF36(Encrypted Tag 9F20 TLV, T2, DD)<len><val>
                DF37(Encrypted Tag 9F61 TLV, T2 CVC3)<len><val>
                DF38(Encrypted Tag 9F62 TLV, T1, PCVC3)<len><val>
                DF39(Encrypted Tag DF812A TLV, T1 DD)<len><val>
                DF3A(Encrypted Tag DF812B TLV, T2 DD)<len><val>
                DF3B(Encrypted Tag DFDF4A TLV, T2 ISO Format)<len><val>
                DF40(Encrypted Value only of DFDF4A, T2 ISO Format)<len><val>
```

DynaPro Format:

```
F9<len>/* container for MAC structure and generic data */
DFDF54(MAC KSN)<len><val>
DFDF55(MAC Encryption Type)<len><val>
DFDF25(IFD Serial Number)<len><val>
FA<len>/* container for generic data */
    70<len>/*container for ARQC */
        DFDF53<len><value>//*fallback indicator */
        5F20<len><value>//*cardholder name */
        5F30<len><value>//*service code */
        DFDF4D<len><value>//* Mask T2 ICC Data */
        DFDF52<len><value>//* card type */
        F8<len>//*container tag for encryption */
            DFDF59(Encrypted Data Primitive)<len><val (Decrypt
            data to read tags)>
            DFDF56(Encrypted Transaction Data KSN)<len><val>
            DFDF57(Encrypted Transaction Data Encryption Type)<val>
            DFDF58(# of bytes of padding in DFDF59)<len><val>
(Buffer if any to be a multiple of 8 bytes)
CBC-MAC (4 bytes, always set to zeroes)
```

The Value inside tag DFDF59 is encrypted and contains the following after decryption:

```
FC<len>/* container for encrypted generic data */
    <tags defined by DFDF02 >
    .
    .
```

Appendix C – ARQC Response (from online processing)

Appendix C ARQC Response (from online processing)

This section gives the format of the data for the Online Processing Result / Acquirer Response message. This request is sent to the reader in response to an ARQC Message notification from the device. The output is controlled by Property 0x68 – EMV Message Format. There are currently 2 selectable formats: Original and DynaPro. It is a TLV object with the following contents.

Original format:

```
F9<len>/ * container for ARQC Response data */
    DFDF25 (IFD Serial Number)<len><val>
    FA<len>/ * Container for generic data */
        70<len>/ * Container for ARQC */
            8A<len> approval
            Further objects as needed...
```

DynaPro format:

```
F9<len>/ * container for MAC structure and generic data */
    DFDF54 (MAC KSN)<len><val>
    DFDF55 (Mac Encryption Type)<len><val>
    DFDF25 (IFD Serial Number)<len><val>
    FA<len>/ * Container for generic data */
        70<len>/ * Container for ARQC */
            8A<len> approval
    (ARQC padding, if any, to be a multiple of 8 bytes)
    CBC-MAC (4 bytes, use MAC variant of MSR DUKPT key that was used in ARQC request, from
    message length up to and including ARQC padding, if any)
```

Appendix D- Transaction Result Message – Batch Data Format

Appendix D Transaction Result Message – Batch Data Format

This section gives the format of the data the device uses to do completion processing. The output is controlled by Property 0x68 – EMV Message Format. There are currently 2 selectable formats: Original and DynaPro. It is a TLV object with the following contents.

Original Format:

```
FE<len>/ * container for generic data */
    DFDF25(IFD Serial Number)<len><val>
    FA<len>/ * container for generic data */
        F0<len>/ * Transaction Results */
            F1<len>/ * container for Status Data */
                ... /* Status Data tags */
                    DFDF1A - Transaction Status (See DFDF1A descriptions)
                    DFDF1B - Additional Transaction Information (always 0)
                    DFDF52 - Card Type Used

            F2<len>/ * container for Batch Data */
                ... /* Batch Data tags defined in DFDF17 */
                .../* Note: Sensitive Data cannot be defined in DFDF17*/

            F3<len>/ * container for Reversal Data, if any */
                ... /* Reversal Data tags defined in DFDF05 */
                .../* Note: Sensitive Data cannot be defined in DFDF05*/

            F7<len>/ * container for Merchant Data */
                ... /* < Merchant Data tags */

            F8<len>/ * container tag for encrypted data */
                DFDF56(Encrypted Transaction Data KSN)<len><val>
                DFDF57(Encrypted Transaction Data Encryption Type)<val>

            FA<len>/ * container for generic data */
                DF30(Encrypted Tag 56 TLV, T1 Data)<len><val>
                DF31(Encrypted Tag 57 TLV, T2 Data)<len><val>
                DF32(Encrypted Tag 5A TLV, PAN)<len><val>
                DF35(Encrypted Tag 9F1F TLV, T1 DD)<len><val>
                DF36(Encrypted Tag 9F20 TLV, T2, DD)<len><val>
                DF37(Encrypted Tag 9F61 TLV, T2 CVC3)<len><val>
                DF38(Encrypted Tag 9F62 TLV, T1, PCVC3)<len><val>
                DF39(Encrypted Tag DF812A TLV, T1 DD)<len><val>
                DF3A(Encrypted Tag DF812B TLV), T2 DD<len><val>
                DF3B(Encrypted Tag DFDF4A TLV, T2 ISO Format)<len><val>
                DF40(Encrypted Value only of DFDF4A, T2 ISO
Format)<len><val>
```

DynaPro Format:

```
F9<len>/ * container for MAC structure and generic data */
    DFDF54(MAC KSN)<len><val>
    DFDF55(MAC Encryption Type)<len><val>
    DFDF25(IFD Serial Number)<len><val>
    FA<len>/ * container for generic data */
        F0<len>/ * Transaction Results */
            F1<len>/ * container for Status Data */
                ... /* Status Data tags */
            F8<len>/ * container tag for encryption */
                DFDF59(Encrypted Data Primitive)<len><Encrypted
Data val (Decrypt data to read tags)>
                DFDF56(Encrypted Transaction Data KSN)<len><val>
```

Appendix D- Transaction Result Message – Batch Data Format

```
DFDF57 (Encrypted Transaction Data Encryption Type)<val>
DFDF58 (# of bytes of padding in DFDF59)<len><val>
F7<len>//* container for Merchant Data */
... /* < Merchant Data tags */
(Buffer if any to be a multiple of 8 bytes)
CBC-MAC (4 bytes, always set to zeroes)
```

DFDF1A Transaction Status Return Codes

0x00 = Approved
0x01 = Declined
