WHAT SETS PAX APART

Ask us about PAX's terminals and all that they can do.

Integration with Select PAX Hardware

Strategic collaboration to expand secure hardware options (Android, all-in-one, semi-integrated, dual monitors, PIN/Debit) with Magensa Payment Protection Gateway (MPPG). This expands the suite of secure hardware options, empowering merchants with innovative and reliable Android-based solutions for their payment needs. These card-present device options are L3 certified solutions to Fiserv, WorldPay, and TSYS.

PAX devices offer PIN/Debit, countertop/handheld, all in one, dual display, built-in receipt printers and more, and coupled with Magensa eCommerce and alternative payments to provide a complete omni-channel solution.

The inclusion of PAX terminals in Magensa's ecosystem underscores the commitment to delivering state-of-the-art payment technologies, value-added applications, and services, and the latest in payment security.

AES ENCRYPTION

This integration also supports AES 256 DUKPT encryption standard - ensuring optimum data security at every transaction stage.

SIMPLIFIED INTEGRATION

One integration for ISVs for connection to Magensa Cloud Services and Gateway.

SUBSIDIARY

Magensa, LLC is a subsidiary of MagTek, Inc.
