RAM Mounts, Enclosures and Mounts

PARTNERSHIPS MATTER

Bring payment and access solutions more places with RAM® Mounts IntelliSkin Thin-Case™ with a GDS® Kiosk Dock

WORKS WITH
MagTek DynaFlex II Go

WHAT SETS RAM MOUNTS APART

The flexibility to go from mobile to secure dock in seconds

MOBILE TO DOCKING SOLUTION

RAM® Mounts, a leading manufacturer of rugged mounting and docking solutions, is proud to announce a new partnership with MagTek, a global leader in secure payment technology and security solutions. This collaboration introduces integrated payment-ready docking solutions designed specifically for tablets in retail environments, combining IntelliSkin® Thin-Case™ with MagTek DynaFlex II Go.

Android and iOS Host Devices

Currently built for Samsung Tab A11+ and A9+ and Apple iPad 10th/11th Gen and features an integrated enclosure designed specifically for the MagTek DynaFlex II Go. When paired with a GDS® Uni-Conn™ Powered Dock, organizations can deploy a traditional countertop point-of-sale station while maintaining the flexibility to undock the tablet and assist customers wherever service is needed.

Made for Retailers

Combining RAM® Mounts' GDS® ecosystem with MagTek's secure card reader technology lets retailers transform tablets into fully mobile POS systems. Store associates can assist customers anywhere on the floor, reducing checkout lines, improving engagement, and increasing overall transaction speed.

Minimize Cable Clutter

The integrated design also minimizes cable clutter and simplifies device management. With secure docking, consistent charging, and reliable mounting, retailers can deploy scalable solutions across multiple locations while maintaining a standardized setup.

Payment & Access Peripheral

MagTek's DynaFlex II Go brings industry-leading security and flexibility to mobile payments, supporting a wide range of transaction types (tap, dip, swipe, and read bar codes) while ensuring compliance with the latest security standards. Paired with IntelliSkin® Thin-Case™, retailers gain a durable, purpose-built solution that stands up to high-traffic environments. Built for mobility and versatility, this enables pay-at-the-table, curbside, delivery, line-busting, and any other type of mobile payment.

Use Cases

RESTAURANTS - Flexible Service for Fast-Moving Environments

The morning rush has started, and customers enter a bakery, seeking a quick checkout experience before work. As the line grows, staff face the challenge to keep orders moving without sacrificing customer service.

Traditionally, transactions flow through a single checkout station. But with the IntelliSkin® Thin-Case™ and MagTek DynaFlex II Go, staff can quickly adapt to changing demand with this line-busting solution.

A tablet that begins docked in a GDS® Kiosk Dock behind the counter can be removed in seconds, allowing employees to take orders, answer questions, and complete transactions anywhere in the store. Customers spend less time waiting in line, while staff focus on delivering a personalized experience.

In the evening, the same solution supports a packed brewery. Employees can move throughout the venue with this pay-at-the-table solution, process payments on the spot, and keep service flowing during peak hours. When the rush slows, the tablet returns to its dock, charged and ready for the next customer.

RETAIL - Reducing Lines Without Sacrificing Service

Customers expect fast, personalized service the moment they walk through the door up until they complete their purchase.

Associates help shoppers find products, answer questions, and make purchasing decisions, yet the sale often still depends on directing customers to a fixed checkout counter. This can create unnecessary friction, interrupt the customer experience, and contribute to congestion during busy periods.

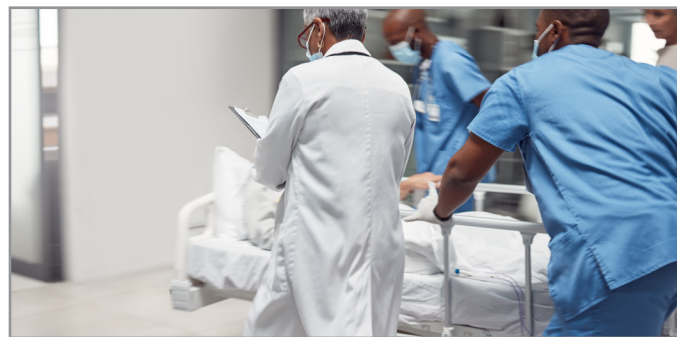

With the IntelliSkin® Thin-Case™ and MagTek DynaFlex II Go solution, associates are able to seamlessly begin and complete the customer journey from their device.

A team member assisting a shopper can immediately check inventory, provide recommendations, and process the transaction where the interaction began with concierge retail service. Rather than ending a productive conversation with directions to the register, they can complete the sale in the aisle, the showroom floor, or anywhere throughout the store.

When traffic increases, additional tablets can be quickly undocked and deployed as mobile checkout stations to help reduce congestion and keep customers moving. Once the rush subsides, the devices can return to kiosk docks to charge and revert back to a traditional POS.

This improved workflow creates a more efficient shopping experience, shorter wait times, and flexibility for teams looking to meet customers wherever the sale happens.

HEALTHCARE - Supporting More Efficient Patient Experiences

After receiving care, patients need to visit separate desks to complete paperwork, verify information, or process payment before exiting the facility. The discharge process becomes an obstacle in the already lengthy transition home.

With a payment-enabled tablet solution from RAM® and MagTek, healthcare staff can bring these interactions directly to the patient. Administrative personnel can securely review information, answer questions, and process payments bedside using a tablet equipped with the IntelliSkin® Thin-Case™ and MagTek DynaFlex II Go. Healthcare staff benefits from more streamlined workflows that allow patients to experience a seamless discharge process.

This solution from RAM® and MagTek supports additional functions throughout the day. Mounting the device in a GDS® Uni-Conn™ Kiosk Dock transforms it into a patient self-check-in station in a clinic lobby or reception area. When mobility is needed, staff can simply remove the tablet and bring services directly to patients.

By supporting both attended and self-service workflows from a single solution, healthcare organizations can maximize device utilization while enhancing the overall patient experience.
