MagTek Expands Access to the Magensa Payment Protection Gateway with DishOut Partnership and Certification of PAX Terminals
L3 Certifications with Magensa and Leading Payment Processors to be Complete During Q2 2024

Seal Beach, CA, April 17, 2024 - MagTek, a global leader in payment technology and security solutions, is pleased to announce the impending certification of PAX payment terminals on the Magensa Payment Protection Gateway (MPPG). This strategic collaboration bolsters Magensa's robust ecommerce, alternative payment, and tokenization capabilities with new card present device options, providing a comprehensive set of L3 certified solutions to multiple payment processors benefiting integration partners and merchants.

"This certification marks an important milestone for MagTek, our Magensa Gateway, and our ISV partners," said Andy Deignan, CEO of MagTek. "By integrating a wide variety of PAX terminals in collaboration with DishOut to our Magensa Payment Protection Gateway, we are expanding our suite of secure hardware options, empowering merchants with innovative and reliable Android-based solutions for their payment needs."

MagTek's partnership with DishOut, highlighted for their device and gateway integration support, further enhances the capabilities of the Magensa Payment Protection Gateway for both ISOs and ISVs. DishOut's TRXconnect SDK and Slingshot APIs, paired with its TRXpay application, simplifies payment processing, protects customer information, and integrates payments seamlessly with POS applications, enhancing the overall value proposition for integration partners and their customers. PAX terminals will be able to be utilized in stand-alone, or semi-integrated environments with value added services like cash discount/dual pricing, campus card, gift/loyalty, and omni tokenization.

“We are very excited to be partnering with MagTek and PAX to bring innovative solutions that the market has been asking for,” says Rory Hersch, CEO of DishOut. “Combining Slingshot and TRXconnect with Magensa’s services via TRXpay and/or the ISV’s own application, provides transformative technology to the ISO, ISV, and merchant communities.”

The inclusion of PAX terminals in Magensa’s ecosystem underscores the commitment to delivering state-of-the-art payment technologies, value-added applications, and services, and the latest in payment security. This certification also supports AES 256 DUKPT encryption, ensuring data security at every transaction stage.

“PAX Technology is excited to partner with two industry leaders who share our vision of innovation, security, and enhancing the payment experience,” said Andy Chau, PAX Technology, Inc. President and CEO. “Through this collaboration, new merchants and customers will now have access to PAX’s user-friendly Android devices and MagTek’s and DishOut’s secure, efficient payment processing.”
